

## Smart data management for *AutoCAD Civil 3D* pipe networks

**Urbano Visio** is a pipe network data management add-in for *AutoCAD Civil 3D*, with smart features for pipe and structure selection, editing and analysis. It supports a modern BIM workflow, improves productivity and decreases design time.

Civil engineers and experts contributed their ideas and experience to help create a software that offers solutions to real-life problems. **Urbano Visio** is the right tool to help you find and inspect important design data, use smart data selections and filters, apply editing changes with precision and quickly create data tables and reports.

**Urbano Visio** is available for *AutoCAD Civil 3D* 2016 – 2017.

### KEY FEATURES

#### DATA GRID

Display all pipe and structure data including custom data from a part list, expressions and *AutoCAD Map 3D* object data. Create custom data groups and store them in configurations for use in new projects.

#### SELECTIONS

Select pipes and structures directly from the drawing and view their data in the data grid. Smart selections include element sequence, network branch and profile.

#### FILTERS

Create simple and complex data queries to serve as ready-to-use filters for the data grid. Apply filters to display only pipes/structures that match the selected query conditions.

#### INSPECTION

Select any cell in the data grid and the appropriate pipe or structure will be highlighted in both plan and profile views. Then zoom-in to plan or profile for an up-close inspection.

#### EDITING

Select one cell, several cells or a whole column and set the new value. Use smart selections and editing to quickly input missing data and correct mistakes.

#### TABLES

Select any part of the data grid and create a standard *AutoCAD* table with *AutoCAD Civil 3D* data for pipes and structures. After you make design changes, the table will refresh automatically.

#### REPORTS

To create a simple report just copy any part of the data grid and paste it directly to another *Windows* program e.g. *Microsoft Excel*. Reports can contain standard and custom data for pipes and structures, expressions and object data.

#### LEARN QUICKLY

Every program function is documented in the online help and supported with video guides.

## STUDIOARS

Developed by **StudioARS**

For the last 20 years, **StudioArs** has been developing **Urbano** software for the design, calculation and analysis of storm & sanitary sewage, water and gas pipe networks. With the support of our authorized partners we deploy and implement **Urbano** in more than 10 language versions worldwide.
